

Microstamping

of High-Performance-Materials

Based on our own stamping technology we offer stamping production of high performance materials like high tension steel materials, so called memory steel materials (Ni Ti) as well as precious metals (Au, Ag, Pd).

Parts can be produced in very tight dimensions of $250\text{ }\mu\text{m}$ and a thickness $> 20\text{ }\mu\text{m}$. Stamping dimension tolerances of less than $10\text{ }\mu\text{m}$ are available.

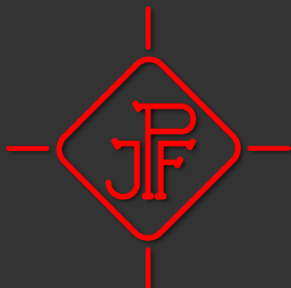

Based on the JPF stamping technology we can offer high effective tooling costs.

Range of Application

- ◆ high volume production for industrial parts
- ◆ medical stamping parts

Please provide us with your demand!
